

About my passion

"We love what we do and we do what our clients love & work with great clients all over the world to create thoughtful and purposeful websites."

"Learning HTML and CSS is a lot more challenging than it used to be. Responsive web design adds more layers of complexity to design and develop websites."

"We love what we do and we do what our clients love & work with great clients all over the world to create thoughtful and purposeful websites."

"Website without visitors is like a ship lost in the horizon."

"Code is read more than it is written."

EXPERIENCES:

INTERNSHIP

worked as a intern in PROJECT CONTEST INNOVATIONS(PCI) LLP with data science using advanced python programming (click)

The user is taken to the internship certificate page when they click the text "click"

ABOUT ME:

I'm Menaga, i'm currently pursuing my computer science and engineering degree in velammal college of engineering and technologies. basically i had a too much of intrest in designing, that makes me to look up for the web developer role. My interest in Web development came from experience learning to design and build my own personal Web site. It is an outlet that allowed me to combine computer skills and creativity.I enjoyed the creative way to create my imagination over the web.I propose to reflect how the fast growing industry of Web development offers a creative and diverse opportunity to work in a field that fulfills the needs of the employers of today. I will address why Web development is a dynamic career choice for high school students, and how to get started in this career.
